

RadiForce® G22

19.6" CLASS MONOCHROME LCD MONITOR

2 megapixel (1200 x 1600) resolution and 10-bit (1,024 tones) simultaneous grayscale display for accurate diagnosis in CT, DSA, and MRI.

10-BIT GRAYSCALE DISPLAY

The G22 produces 1,024 (10-bit) simultaneous grayscale tones from a palette of 3,061. EIZO also offers a choice of graphics boards with simultaneous 10-bit output and a DVI-D port for an all-digital connection.

CALIBRATION SUPPORT AND QC MANAGEMENT

The G22 offers long-term image quality and consistency through EIZO's optional RadiCS GX2 calibration kit. RadiCS GX2 features include acceptance testing, calibration to the DICOM Part 14 standard, detailed calibration history reports, test pattern checks, and automated scheduling of pattern, luminance, grayscale, and uniformity checks. It also offers manufacturer-independent asset management of the PC, graphics boards, and monitors.

CLEAR BASE AND BLUE BASE

The G22 is available in clear base and blue base options.

ADVANCED LCD PANEL

The G22 utilizes the latest in LCD technology with a new Super-IPS panel that offers 170° viewing angles and minimal changes in contrast when viewed from off-center. The 800 cd/m² brightness and 600:1 contrast ratio ensure comfortable viewing in both ambient light environments and dark reading rooms.

BRIGHTNESS STABILIZATION

● Drift Correction Circuit

Quickly stabilizes the brightness level after startup or coming out of power save mode.

● Auto Brightness Control

The monitor detects and automatically compensates for brightness changes caused by surrounding temperatures and the passage of time for stable brightness and longer service life.

*This brightness stabilization function is EIZO patented technology (Japan Patent Numbers 3171808 and 3193315; US Patent Number 6188380).

SLIM BEZEL DESIGN

Narrow bezels along all four sides save space and require less eye movement in a multi-panel environment. Other features include an 82 mm height adjustable stand, 40° tilt, 70° swivel, and 90° portrait orientation.
